1775. Install with central clock; bearings of contact at bottom of pendulum are bad that contact often would stay out, making central torpedoes. Tilted bearings which fixed this but let down current to relay so much that better mixed often. Removed one contact disc, smoothed up bearings and refixed. Controlling very well.

Controlled perfectly, remainder of night. Longer it

(1937)

* 3 5 2	0 01 W	45 26	3	7.30	G5	4,4,	* Off from 2.06 to 2.58

* At about 2 o'clock the dome refused to turn; checked dome turning switch (#7) fuses and trolley; Had to stop telescope at 2.06 to prevent it hitting platform. Called Dr Heard and he came up; fiddled with relays pushing them in and out a little bit (but not enough to make contact) and finally got them to work again. Reset on star at 2.58. Hd. went home and immediately without warning the power went off. Called Hydro and they didn't know when it would be on again. Gave up and closed shutter by hand.

4h 22m — power on again, closed completely
